Transfusion Reactions

**Do you know which reactions
typically present with fever?**

Transfusion Reactions

Fever, chills, and rigors are among the most common symptoms observed after a blood transfusion. They may indicate several possible transfusion reactions.

Categorize the transfusion reactions

Match the categories on the next page:

Category 1: Reactions that typically DO present with fever

Category 2: Reactions that typically DO NOT present with fever

Categorize the transfusion reactions

- A.** Acute haemolytic transfusion reaction (AHTR)
- B.** Febrile non-Haemolytic Transfusion Reaction (FNHTR)
- C.** Transfusion Transmitted Bacterial Infection (TTBI)
- D.** Transfusion Related Acute Lung Injury (TRALI)
- E.** Underlying medical condition
- F.** Allergic Reaction
- G.** Anaphylactic Reaction
- H.** Transfusion Associated Dyspnoea (TAD)
- I.** Transfusion Associated Circulatory Overload (TACO)
